

# ARE **YOU** LIVING WITH UNCONTROLLED SEIZURES?

Help is available.

Most people living with **epilepsy** have seizures that can be controlled by **anti-seizure drugs**

But **1 in 3** people continue to have seizures despite taking **anti-seizure drugs**

This is known as **drug-resistant epilepsy** and may require a different **type of treatment** for seizure control

If you are not seizure-free after trying **2 anti-seizure drugs**, you have the right to be referred to an **epilepsy specialist** to talk about your treatment options.

## STEP 1

Diagnosed with epilepsy?

## STEP 2

Try 1<sup>st</sup> drug. Still having seizures?

## STEP 3

Try 2<sup>nd</sup> drug. Still having seizures?

## STEP 4

Talk to your doctor about a referral to an epilepsy specialist.
